GFM Security Evaluator

for the IBM Power System ®, IBM i ®, iSeries ® and AS/400 ® systems

System Information

The GFM Security Evaluator software tool for this IBM midrange system is now available. Auditors and management can use this product to independently evaluate the data security environment on the system without the assistance of the security officer profile.

If you already have the Softlight Auditor product or similar products, the GFM Security Evaluator is an excellent companion product to complement these tools.

Note for banks: Why not use the reports from the GFM Security Evaluator to identify and correct data security concerns before the bank IT examiners or external auditors come in.

Also, sample reports are available to analyze the application security and do data analysis for most of the popular core banking products that run on the IBM i. Call to see if your banking software is included in the current release.

Reports

Security reports available in the current release of the product include:

- Users by User Class
- Users with Spec. Authorities

- Users with Command Line
- User Passwords not Expiring
- User Profiles Supplied by IBM
- User Profiles Being Monitored
- Default Passwords
- Critical Commands Reports
- Library Analysis Reports
- Vendor Analysis Reports
- And many more

Menus

The software is completely menu driven. Plus the menus give the user read access to most of the system security information including object descriptions, authorities, system values, authorization lists, and more.

Installation

The GFM Security Evaluator software tool can be installed and configured in less than an hour and is ready to use.

Pricing

The current price for the GFM Security Evaluator is $2,500 for initial installation, configuration, & training.

The product will be updated when necessary. Features will be added to keep up to date with IBM changes. Current annual license fee (after the first year) will be $1250 each year to receive updates and continued telephone and email support.

Other Information

We provide on-site training and support for various audit and security related areas including IT security & audit, IT Audits and IT Risk Assessments, Network Security, and more.

In addition, we offer public seminars at various locations during the year. Call or visit our website for more information:
