GFM Exit Point Monitor

for the IBM Power System ®, IBM i ®, and AS/400®

Can you answer the questions below and still feel your system is secured?

1. Did a disgruntled employee download your CIF, DDA, CD, or Loan master files before they went to work at the bank down the street?

2. Did a user modify the amount or rate of a loan through the Excel transfer request add-in?

3. You have limited a user's capability of entering commands at the green screen command line, so what command did they just enter from a FTP or remote command session?

4. You have granted ODBC reporting capabilities to some of your personnel; are they using this tool to query payroll data?

Would the answers to the questions above be available to a forensics team if needed? The answer is no, unless you have exit programs to log and monitor these activities.

The GFM Exit Point Monitor software was developed as an effective and simple tool to implement and use as a detective control to monitor and report on these activities.

Pricing

The current price for installation, configuration and training for the GFM Exit Point Monitor software product is $995.00. After the first year, a $795.00 annual support and update fee is required to continue using the product. Changes will be made when necessary and features will be added to keep the software up-to-date with IBM system changes.

Other Information

We provide public, on-site and web-based training and support for various audit and security related areas including IT security & audit, IT Audits, IT Risk Assessments, Network Security, and more. Call for more information:
